Questions 1-10

Line (5) Niagara Falls, one of the most famous North American natural wonders, has long been a popular tourist destination. Tourists today flock to see the two falls that actually constitute Niagara Falls: the 173-foot-high Horseshoe Falls on the Canadian side of the Niagara River in the Canadian province of Ontario and the 182-foot-high American Falls on the U.S. side of the river in the state of New York. Approximately 85 percent of the water that goes over the falls actually goes over Horseshoe Falls, with the rest going over American Falls.

(10) Most visitors come between April and October, and it is quite a popular activity to take a steamer out onto the river and right up to the base of the falls for a close-up view. It is also possible to get a spectacular view of the falls from the strategic locations along the Niagara River, such as Prospect Point or Table Rock, or from one of the four observation towers which have heights up to 500 feet.

(15) Tourists have been visiting Niagara Falls in large numbers since the 1800s; annual visitation now averages above 10 million visitors per year. Because of concern that all these tourists would inadvertently destroy the natural beauty of this scenic wonder, the state of New York in 1885 created Niagara Falls Park in order to protect the land surrounding American Falls. A year later Canada created Queen Victoria Park on the Canadian side of the Niagara, around Horseshoe Falls. With the area surrounding the falls under the jurisdiction of government agencies, appropriate steps could be taken to preserve the pristine beauty of the area.

Black and white pepper both come from the fruit of the *Piper nigrum*, a vine with fruits called peppercorns. The peppercorns turn from green to red as they ripen and finally blacken as they dry out. The dried-out peppercorns are ground to obtain black pepper. White pepper, which has a more subtle flavor than black pepper, comes from the same peppercorns as black pepper; to obtain white pepper, the outer hull of the peppercorn, the pericarp, is removed before the peppercorn is ground.

(10) Red and green peppers, on the other hand, come from a completely different family from black and white pepper. Red and green peppers are from the genus *Capsicum*. Plants of this type generally have tiny white flowers and fruit which can be any one of a number of colors, shapes, and sizes. These peppers range in flavor from very mild and sweet to the most incredibly burning taste imaginable. Bell peppers are the most mild, while habaneros are the most burning.

(15) Christopher Columbus is responsible for the present-day confusion over what a pepper is. The *Piper nigrum* variety of pepper was highly valued for centuries, and high demand for pepper by Europeans was a major cause of the fifteenth-century push to locate ocean routes to the spice-growing regions of Asia. When Columbus arrived in the New World in 1492, he was particularly interested in finding black pepper because of the high price that it would command in Europe. Columbus came across plants from the *Capsicum* family in use among the people of the New World, and he incorrectly identified them as relatives of black pepper. Columbus introduced the spicy *Capsicum* chili peppers to Europeans on his return from the 1492 voyage, and traders later spread (20) them to Asia and Africa. These *Capsicum* peppers have continued to be called peppers in spite of the fact that they are not related to the black and white pepper of the *Piper nigrum* family.

Questions 20–31

Line Just two months after the flight of *Apollo 10*, the *Apollo 11* astronauts made their historic
(5) landing on the surface of the Moon. This momentous trip for humanity also provided scientists with an abundance of material for study; from rock and soil samples brought back from the Moon, scientists have been able to determine much about the composition of the Moon as well as to draw inferences about the development of the Moon from its composition.

(10) The Moon soil that came back on *Apollo 11* contains small bits of rock and glass which were probably ground from larger rocks when meteors impacted with the surface of the Moon. The bits of glass are spherical in shape and constitute approximately half of the Moon soil. Scientists found no trace of animal or plant life in this soil.

(15) In addition to the Moon soil, astronauts gathered two basic types of rocks from the surface of the Moon: basalt and breccia. Basalt is a cooled and hardened volcanic lava common to the Earth. Since basalt is formed under extremely high temperatures, the presence of this type of rock is an indication that the temperature of the Moon was once extremely hot. Breccia, the other kind of rock brought back by the astronauts, was formed during the impact of falling objects on the surface of the Moon. This second type of rock consists of small pieces of rock compressed together by the force of impact. Gases such as hydrogen and helium were found in some of the rocks, and scientists believe that these gases were carried to the Moon by the solar wind, the streams of gases that are constantly emitted by the Sun.

Questions 32–40

Today, the most universally known style of trousers for both men and women is jeans; these trousers are worn throughout the world on a variety of occasions and in diverse situations. Also called levis or denims, jeans have an interesting history, one that is intermixed with the derivations of the words *jeans*, *denims*, and *levis*.

Line
(5)

The word *jeans* is derived from the name of the place where a similar style of pants developed. In the sixteenth century, sailors from Genoa, Italy, wore a rather unique type of cotton trousers. In the French language, the word for the city of Genoa and for the people from that city is Genes; this name became attached to the specific style of pants worn by the sailors from this city and developed into the word *jeans* that today describes the descendants of the Genovese sailors' cotton pants.

(10)

Similar to the word *jeans*, the word *denim* is also derived from a place name. In the seventeenth century, French tailors began making trousers out of a specialized type of cloth that was developed in the city of Nimes, France, and was known as *serge de Nimes*. This name for the cloth underwent some transformations, and it eventually developed into today's *denim*, the material from which jeans are made and an alternate name for these popular pants.

(15)

The word *levis* came from the name of a person rather than a place. In the nineteenth century, immigrant Levi Strauss came to America and tried his hand at selling heavy canvas to miners taking part in the hunt for gold in northern California. Strauss intended for this canvas to be used by miners to make heavy-duty tents. This first endeavor was a failure, but Strauss later found success when he used the heavy canvas to make indestructible pants for the miners. Levi then switched the fabric from brown canvas to blue denim, creating a style of pants that long outlived him and today is referred to by his name. A modern-day urban shopper out to buy some levis is searching for a close relative of the product that Strauss had developed years earlier.

Questions 41–50

During the heyday of the railroads, when America's rail system provided the bulk of the country's passenger and freight transportation, various types of railroad cars were in service to accomplish the varied tasks handled by the railroads. One type of car that was not available for public use prior to the Civil War, however, was a sleeping car; ideas for sleeping cars abounded at the time, but these ideas were unworkable. It unfortunately took the death of a president to make the sleeping car a viable reality.

Cabinet-maker George M. Pullman had recognized the demand for sleeping cars and had worked on developing experimental models of sleeping cars in the decade leading up to the Civil War. However, in spite of the fact that he had made successful test runs on the Chicago and Alton Railroads with his models, he was unable to sell his idea because his models were too wide and too high for existing train stations and bridges. In 1863, after spending time working as a storekeeper in a Colorado mining town, he invested his savings of twenty thousand dollars, a huge fortune at that time and all the money that he had in the world, in a luxurious sleeping car that he named the Pioneer. Pullman and friend Ben Field built the Pioneer on the site of the present-day Chicago Union Station. For two years, however, the Pioneer sat on a railroad siding, useless because it could not fit through train stations and over bridges.

Following President Lincoln's assassination in 1865, the state of Illinois, Lincoln's birthplace, wanted to transport the presidential casket in the finest fashion possible. The Pullman Pioneer was the most elegant car around; in order to make the Pullman part of the presidential funeral train in its run from Springfield to Chicago, the state cut down station platforms and raised bridges in order to accommodate the luxurious railway car. The Pullman car greatly impressed the funeral party, which included Lincoln's successor as president, General Ulysses S. Grant, and Grant later requested the Pioneer for a trip from Detroit to Chicago. To satisfy Grant's request for the Pioneer, the Michigan Central Railroad made improvements on its line to accommodate the wide car, and soon other railroads followed. George Pullman founded the Pullman Palace Car Company in partnership with financier Andrew Carnegie and eventually became a millionaire.
